DKRZ JupyterHub

The exercises are provided as Python Jupyter notebooks and are run on JupyterHub provided by DKRZ.

Log in with your u-Account at https://jupyterhub.dkrz.de/

Choose the following profile, fill in the account name "um0878" and start a notebook server

← → C ☆ 🔒 jupy	+ terhub.dkrz.de/hub/spawn/u237002/preset	☆ 0 25 🙅 🖻 🗯 🚱

First time setup

First, you have to checkout the lecture git repository and install the required Python modules, the following step has to be done only once.

Open a terminal

C 🏠 🔒 jupyterhub.dkrz.de/user/u233	7002/preset/tree/home/zmaw/u237002? 🛧 🕧 😹 💩 🧔 🌟			
	Logout Control Panel			
Files Running Clusters Nbextens	ions			
Select items to perform actions on them.	Upload New - 2			
0 - home / zmaw / u237002	Notebook:			
<u>с</u> .	Python 2 (using the module python/2.7.12) Python 2 bleeding edge (using the module anaconda2/bleeding_edge)			
anaconda3	Python 3 (using the module python/3.5.2)			
arts-lectures	Python 3 bleeding edge (using the module anaconda3/bleeding_edge) Python 3 unstable (using the module python3/unstable)			
🗋 🗅 bin	Other:			
C conda-envs	Text File			
Deployment	Folder			
Desktop	Terminal			
intel	2 years ago			
🗋 🗀 konrad	2 years ago			
🗋 🗀 olemke	Colemke 5 years ago			
C PycharmProjects	3 years ago			
c scratch	5 years ago			
🗋 🗅 tmp	3 days ago			
🗋 🗀 tmux	8 months ago			

Run the following commands by copy'n'pasting them into the terminal:

```
module unload netcdf_c
module load anaconda3
pip install --user /work/um0878/users/olemke/rtcourse/python/*.whl
git clone --branch=wise2021 /work/um0878/users/olemke/rtcourse/arts-lectures.git
```

If no errors occured, type "exit" and close the browser tab.

Switching to JupyterLab

JupyterLab offers a more comfortable interface than the standard Jupyter Notebooks. To access JupyterLab, change the string ".../preset/tree/..." in the browser URL to ".../preset/lab/tree/...":

O A https://jupyterhi DKRZ	ub.dkrz.de/user/u237002/preset/tree/nome/zmaw/u237002		🕕 🥔 🏚 🛛	trol Panel
KT WWWEE EXECUTION BOLIDOGS	/preset/lab/tree/

anaconda3			a year ago	
arts-lectures			6 hours ago	
🗋 🗅 bin			a year ago	
C conda-envs			6 days ago	
Deployment			3 years ago	
Desktop			3 years ago	
intel			2 years ago	
l b konrad			2 years ago	
C olemke			5 years ago	
PycharmProjects			3 years ago	
scratch			5 years ago	
🗆 🗅 tmp			6 days ago	
🗆 🗅 tmux			8 months ago	
typhon			3 years ago	
work			5 years ago	
Untitled.ipynb			13 days ago	35.2
Anaconda3-2019.03-Linux-	x86_64.sh		a year ago	686 N

After a short loading animation, the JupyterLab user interface will appear.

Opening a notebook

Navigate in the file browser in the sidebar on the left to the exercise subfolder, e.g.

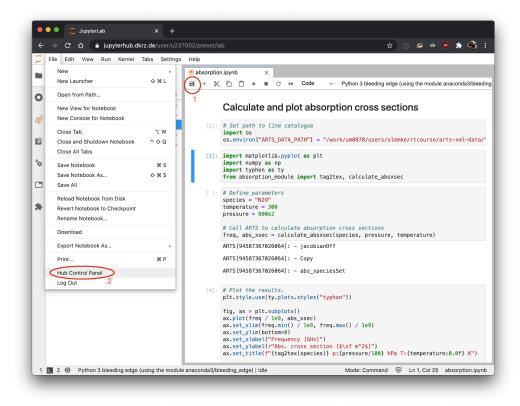

```
arts-lectures/exercises/01-molecule_spectra/
```

and open the first exercise notebook "absorption.ipynb".

Closing the notebook and server

After you're done for the day, save your notebook and shut down the notebook server. The notebook will be shutdown automatically after 12 hours. To save compute time (which will be accounted to the project even when the notebook is running in the background), please always close it down after you're done.

First save your notebook by clicking on the disk icon in the toolbar, then go to the Hub Control Panel:

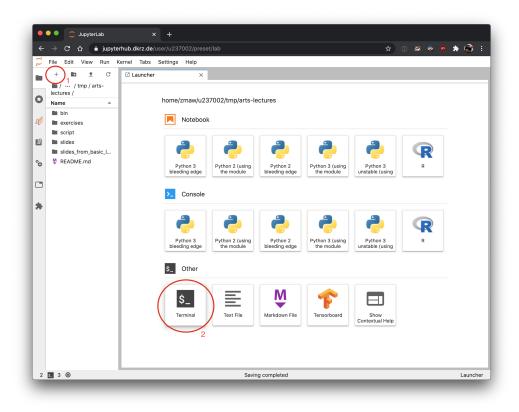

And stop the notebook server

			☆ ③ &	i 💩 🙂	* 🛞 :

Update your local copy of arts-lecture

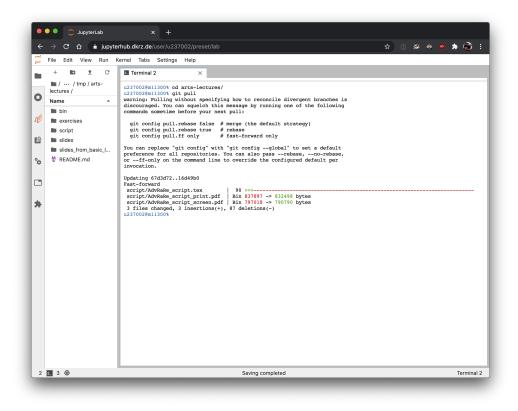

During the course, new exercises and updates are added to the arts-lecture repository. To update your local version of arts-lectures, open a terminal in JupyterLab.

In the terminal go to your arts-lectures folder and run "git pull"

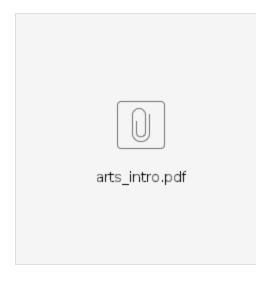

cd arts-lectures git pull

You can ignore the warning message from git. At the end of the output, you see which files have been updated. In the example below, the lecture script has received updates:

Greenhouse and Climate Sensitivity - ARTS Lectures - Introduction

Click on the image below to open the pdf for the slides of the ARTS lectures introduction.
